

## Watershed Rehabilitation

April 2009

## *Reinvesting in the Sandy Creek No. 23 Watershed Structure, Georgia*

### Introduction

This dam rehabilitation project will create or save jobs and protect lives, property, and public works from dam failure. During and after floods, it will prevent injury and disease, reduce need for emergency personnel, and prevent disruption of community services.

The Sandy Creek No. 23 Dam is located in Jackson County, Georgia.

### Project Description

- **Location:** Jackson County, 10th Congressional District
- **Federal Funding:** \$1,675,000
- **Sponsor Funding:** \$791,599

This project will install an auxiliary spillway over the top of this dam to maintain structural integrity during major storm events. Once this project is completed, this dam will meet current public safety standards.

### Partners

- USDA, Natural Resources Conservation Service
- Georgia Soil and Water Conservation Commission
- Oconee River Soil and Water Conservation District
- Jackson County Board of Commissioners

### Benefits

This project will protect transportation networks, utilities, and real estate values in the floodplain. The safety of 25 residents will be increased, and many residents will indirectly benefit from improvements to this dam. Nearly 20 miles of stream corridor and flood plain function will be enhanced. There will also be open spaces in areas where houses have been removed.

Funded through the American Recovery and Reinvestment Act (ARRA) of 2009, this project is part of the Obama Administration's plans to modernize the nation's infrastructure, jump-start the economy, and create jobs. NRCS is using Recovery Act dollars to update aging flood control structures, protect and maintain water supplies, improve water quality, reduce soil erosion, enhance fish and wildlife habitat, and restore wetlands. NRCS acquires easements and restores floodplains to safeguard lives and property in areas along streams and rivers that have experienced flooding.

---

### **Economic Opportunities**

Jobs will be created or saved for planning, design, and construction of this project. Protection provided by the dam will help maintain the economic base and enhance future economic development and opportunity in the area. The project will protect transportation networks, utilities, and real estate values. Each year the completed project is expected to provide nearly \$44,000 in average annual flood damage reduction benefits and almost \$8,000 in non-flood damage reduction benefits.

### **Statewide Perspective**

Rehabilitation of Sandy Creek No. 23 will help Georgia achieve the overall goal of upgrading all high-hazard class dams to State safe dam standards.
